SOCIAL IMPACT OF DISTANCE LEARNING IN EDUCATION

Mrs. Hansaben B Gujariya*

Abstract :-

In the post coronary period, we all have to get used to of this means. In its use, we have to acquire skills and in the education, evaluation and self-improvement of students to ensure and secure the future of students by proving online literacy beyond the limitations of time and space, and do best for the development of students and the society. Learning is context and situation-specific. On-line learning provides a materials-based educational experience, which means that although it can be a materials-rich and stimulating learning situation, it can also be a socially impoverished and lonely learning situation. This new learning situation affects many of our new age learners - it can impact of their life, the life of their teachers, their families, the community and the institution that is delivering the content to be learnt.

After getting inspired from the Vedic prayer of the world, I start with the current dimension. In today's new era, new methods have started to be introduced. While sitting far away, we were acquiring knowledge, but in today's world, distant education has become our essential requirement in the world of corona virus. Change is the rule of the world. This world is constantly changing. In the Dash avatar -Vishnu, the watery creature gets a glimpse of change and development in the order of the future Kalki incarnation. Darwin's theory of evolution also signifies change from Single celled Amoeba to identify the growth and development of humans. The Theory of "Survival of the Fittest" came to the fore and stood up.

Today, the poisonous virus Corona which shakes the whole world has influenced our customs, systems and overall behavior. We have to think positively about "What Ever Happens, Happens For Good" Stephen Hawkins has already advised us that the future new born will have to find new places for its existence, the Earth will not suffice beyond 100 years, this question has been raised and answered many a times .Stephen Hawking "I don't think the human race will survive the next thousand years, unless we spread into space. There are too many accidents that can befall life on a single planet. But I'm an optimist. We will reach out to the stars." .3*

This warning tried to awaken the human race. It was clear that there were going to be drastic changes of various types of challenges but it was a question of how, where, what, who, why, whom those challenges would come. By the end of 2019, it is in form of COVID-19 in front of mankind This reference is also true for our education world, corona epidemic appeared in front of the world which changed the image of the whole world. The world will not be the same as it was before this disaster; it also proves to be the same in the field of education.

Today villages, towns, cities, nations, the world, the environment, software, technology and policies are changing rapidly and with this changing time one will have to pace up and adjust. Thinking of what we can do for this

5 W 1H. comes to the mind Why, What, Where, Who When and How, that is,

Why is it required?

What could be done to make it happen?

Where from?,

Who could get it?

When do we get it?

And above all, How-how, in what way can we get?

For this the administration, various institutions and individuals - student teachers - will have to formulate an effective educational strategy. Because it is necessary to change oneself in the post-corona on WAR FRONT of COVID-19 e learning requirements. Construction of smart classrooms with - Technologically connected devices in place of direct square block system is a demand of the time. We have to think that our students should be prepared for distance learning and assessment in casual context with direct education.

न तज्ज्ञानं न तच्छिल्पं न सा विद्या न सा कला

Therefore today if we talk about distance learning ever thing is possible based on the above shlok of BHARAT NATYA SHASTRA. No Wisdom, No Craftsmanship, No Knowledge of Subject, No Arts, No Yoga, No Work which is not seen in Dance(Natya) that is our routine .

The most appropriate medium, physical distancing has become important in our life today, then e-learning and distance learning have become a necessity in our field of learning. Change always happens for the good. The Zen proverb says “Change for good”, and then some things must become honorable.

With the spiritual meaning of this verse, the sound meaning in the context of the webinar is receptive. The Geeta paves the way for us in terms of sects and needs. This verse explains that how much you can adjust with the circumstances, success is determined by that.

Identification with the present and in common determines the success of our future. The five reasons for this success are contained in the above verses.

- 1 - The organization.
- 2 - The one who works.
- 3 - Means by which work is done.
- 4 - Skill.
- 5 - Fate.

Work is accomplished by these five. Which states means and efforts are very important. The gaming scene of Mahabharata is a perfect example of this. Pandavas, who specialize in weapons and war, abandon their means and accept Shakuni's instrument-dice and are defeated. It is very necessary to think that it is very important to change the means by which the instrument does not yield results. It is clear like everything in a day light: - that in the Corona period, the direct sectional, classroom learning tendency is disrupted, then e-learning technology helps us in in-direct learning.

Importance of Technology:

Today the world has become a village and human society a family. In this context, by sitting in the Internet car, the engine like Google is able to take us to the destination. Apart from this, various social platforms of social media connected with the internet also become our helpers. Online Learning - Live class room, docs, sheets, forms online and offline using various applications, PC, laptop, tablet, notepad, smart phone etc. with the help of device tools such as 24 x 7 distance learning can be sustained.

Contact not being established! We can have everything available (except this excuse) - receiving notifications, using notes, reviewing assignments, quizzes, interacting with colleagues, studying at any time, place, position with your willingness . You can prepare a program for this.

Key Benefits of the technology and Internet:

- 1 Time flexibility.
- 2 Location flexibility.
- 3 Context and need-based use.
- 4 Reaching depth and breadth in online resources and information, enriching and diversifying the experience. Cross Discipline, Cross Culture, Cross Campus provide opportunities for collaboration. The development of group skills is overcome Hindrance and various disabilities.
- 5 The governance system will have to be organized in this manner. So that the skills of digitalization and literacy can be prepared according to the demand of the times

e- learning & Limitation of resources

- 1 Access to technology: Many times laptop PCs and mobiles are used jointly. Internet speed limits access to data, dignity, availability of data and regular connectivity etc. becomes a hindrance.
- 2 Ability to use technology: Technology training is required to use many software applications and instruments. Sometimes it is not easy for students and teachers. As required is the switching from instructor based learning to computer mediated learning.
- 3 Privacy: Teachers have to move forward without peer support. There is less time for discussion.

- 4 Availability of too much information: Many times the fear of getting confused by the availability of information of the candidate, there is the fear of missing quality and important information. The lack of skill in online learning impedes the completion of results and the amount of results is also low when the ability to learn is low. Bhavabhuti says
- 5 Lack of livelihood strength: In direct learning, it is not possible to tackle difficulties as students not socially bonded, to give assurance on the occasion of difficulty or pain, to increase self-confidence and encouragement by placing a hand on the shoulder. Overall, indirect teaching is not less useful in ending the crisis of learning even if it is not able to take the place of a lively class segment.
- 6 Shared Symbol System: A new language emerged in this era which has icons textual cues and symbols where participants communicate with others in the same environment and participate in the environment itself.

Icons		Textual cues	
HOME		Laughter	hehe
UP		Rolling on the floor laughing	rofl
BACK		By the way	btw
		friendly	:-)
